(Open to relocation)

Dear Hiring Manager,

I am writing to express my interest in opportunities where I can contribute my expertise in designing resilient, maintainable, and narratable backend architectures. With a strong background in Domain-Driven Design, Clean Architecture, and event-driven systems, I have consistently delivered solutions that are technically robust, transparent, and easily discoverable for future maintainers.

My experience spans various industries, where I have successfully translated complex business requirements into scalable microservices architectures. I excel in collaborating with cross-functional teams to ensure that solutions not only meet technical standards but also align with business goals. I am adept at leveraging technologies such as Docker, Event Sourcing, GRPC, RabbitMQ, Redis, and GraphQL to build systems that are both efficient and adaptable.

Beyond technical execution, I am passionate about creating onboarding artifacts, documentation, and workflows that empower teams to understand and extend systems with confidence. My pragmatic approach ensures that every architectural decision is tied to business outcomes, whether in compliance, reporting, or customer experience.

I am eager to bring this blend of technical expertise and onboarding-first mindset to a forward-thinking organization. I would welcome the opportunity to discuss how my skills can contribute to evolving platforms into narratable, enterprise-grade solutions.

Thank you for considering my application. I look forward to the possibility of contributing and am available at your convenience for an interview.

Sincerely,

Muhammad Ahmod
